## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 7 and 8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 05 April 2006.
2. This application contains claims 7 and 8 drawn to an invention nonelected with traverse in the reply filed 05 April 2006. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

### ***Claim Rejections - 35 USC § 103***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 1-6, and 10-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1 252 973 A1 (cited by applicant) in view of Petroski et al, 2004/0018809, as set forth in the previous Office action. Further, '809 teaches that the light transmitting member and pad are bonded together by melting the bonding surface (the whole member is melted) between the member and pad without the use of adhesive.

### ***Response to Arguments***

5. Applicant's arguments filed 01 February 2007 have been fully considered but they are not persuasive. Applicant argues that Petroski does not teach fusing a window

to a polishing pad, that Petroski teaches a method of diffusion by flowing a polymer onto a porous pad. It is noted that Petroski, [0021] and [0022], discloses injecting a flowable polymer into a cavity formed in a polishing pad, the polymer is then cooled to form the finished polishing pad with window. Applicant, specification, page 16, defines the term "fuse" and the methods of fusing. "The term "fused" refers to a state in which the light transmitting member and the abrasive substrate are bonded together by melting **at least** the bonding surface(s) of both or one of them without using an adhesive. " and "The method of fusing together the light transmitting member and the abrasive substrate is not particularly limited. For example, ***it may be (i) an insert molding method in which one of the light transmitting member and the abrasive substrate is held in a metal mold and the other member is injected and fused***". Petroski's method, and resultant fused polishing pad with window are the same method disclosed by applicant. Petroski does not provide for the window materials, but does teach the claimed fused window and pad.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
